The screenshot shows a terminal window with a blue header bar. The header contains the text "tamitrofanov@server:~ – ssh tamitrofanov@server.tamitrofanov.net" and a close button. Below the header, the terminal displays the output of an SSH command. The user is prompted to confirm the connection to the host "server.tamitrofanov.net (192.168.1.1)". The user responds with "y", and the host is added to the known hosts list. The terminal then shows the password prompt and the web console URL. Finally, it displays the last login time and the prompt for the user on the server.

The image displays two terminal windows side-by-side, both titled 'Welcome to Rocky Linux'. The left window shows the initial boot sequence, including the 'ROCKY LINUX 10' logo and the welcome message. The right window shows the installation progress, including the transaction summary and the completion of the installation.

Left Terminal (Initial Boot):

```

Welcome to Rocky Linux
A community Enterprise Operating System

Rocky Linux is an Enterprise Linux distribution based on the sources available from the CentOS Project and Red Hat, Inc. used for CentOS Stream and Red Hat Enterprise Linux. Rocky Linux intends to be binary compatible with the upstream distributions. The source code can be found at our Rocky Linux Git Service.

Rocky Linux is developed by a diverse team of core developers, with various backgrounds and skill sets that allow them to build, test, and provide Rocky Linux to the world. The core developers are supported by an active user community as well, which includes many testers from the Rocky Linux Testing Team, system administrators, system engineers, managers, core Linux contributors, and

Right Terminal (Installation Progress):

```

4. Выводы

4.1 слайд 1

Сегодня я приобрёл практические навыки по настройке удалённого доступа к серверу с помощью SSH.
